I am currently a second-year graduate student at Nanjing University majoring in astrophysics. My primary research interest centers on gamma-ray burst (GRB) central engines and their associated astrophysical phenomena. The focus of my recent researches has been on analyzing and interpreting GRB observations, especially of the peculiar ones, such as GRB 211211A, GRB 230307A and GRB 231115A. In addition, I am actively involved in studying fast X-ray transients detected by the Einstein Probe Mission.

## EDUCATION

2023 – PRESENT	<b>Graduate student in Astronomy</b> School of Astronomy and Space Science <i>Nanjing University</i>
2019 – 2023	<b>B.S. in Physics</b> School of Physics <i>Nanjing University</i>

## RESEARCH INTEREST

- Fast X-ray transients
- Physical origins and progenitors of GRBs
- Central engines and radiation mechanisms of GRBs
- Data and observation-oriented research on GW-related astrophysical phenomena

## RESEARCH EXPERIENCE

### NJU GRB Group *Member*

JAN 2022 – PRESENT

As a member of Professor Bin-Bin Zhang's GRB research team, I have participated in several research projects and am keen to discover new and exciting GRB events. Specifically, I have been deeply involved with the data analysis and follow-up GW-related research of GRB 211211A (Yin et al., 2023, ApJL), which is a peculiar long-duration burst with kilonova emission (Yang et al., 2022, Nature, participant). Moreover, I led a project to analyze MGF GRB 231115A and confirmed its origin as the second extragalactic magnetar giant flare with a Comptonized fireball model (Yin et al., 2024, ApJL).

### Einstein Probe Mission *Associate STP Member*

MARCH 2023 – PRESENT

The Einstein Probe is a mission of the Chinese Academy of Sciences dedicated to time-domain high-energy astrophysics. Its first detection of a bright X-ray transient, EP240219a, is confirmed to be an untriggered GRB (Yin et al., 2024, ApJL). I serve as the EP Transient Advocate and involved in the data analysis and discussion of many LEIA/EP-detected fast X-ray transients, e.g., GRB 230307A/LXT230307a (Sun et al., 2024, National Science Review, participant), EP240315a (Liu et al., 2024, accepted by Nature Astronomy, participant), and EP240414a.

### GRID Project *Member*

DEC 2020 – PRESENT

Named Gamma-Ray Integrated Detectors (GRID), the mission forms a full-time all-sky one gamma-ray detection network that monitors the transient gamma-ray sky in the multi-messenger astronomy era. Two upgraded CubeSats developed by our NJU team have been

successfully launched. I co-led projects analyzing GRBs detected by GRID, including GRB 220408B (Zhang et al., 2023, RAA) and GRB 230812B (Wang et al., 2024, ApJ under review).

PROFESSIONAL EXPERIENCE/ACTIVITIES

- 2024 **Invited Talk**, GRID 2024 Summer Camp, Tsinghua University
- **Teaching Assistant**, Gamma-Ray Bursts: From Devices and Data to Science, Nanjing University
  - **Oral Talk**, COSPAR 2024, Busan, Korea
  - **Volunteer/Oral Talk/Poster/Ice-breaking Organizer**, The Third Nanjing GRB Conference, Suzhou, China
  - **Teaching Assistant**, Gravitational Wave and Related Astrophysics, Nanjing University

REVIEWER/REFEREE

- **Nature Astronomy**
- **Journal of High Energy Astrophysics**

SCHOLARSHIPS AND HONORS

- 2024 **National Scholarship for Graduate Student**  
(*Most prestigious scholarship for graduate student in China*)
- 2023, 2024 **First Class Academic Scholarship**
- 2023 **Outstanding Graduate**
- 2021, 2022 **The People’s Scholarship of China**
